DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a database structure.
- II. Claims 12-36, drawn to a method of generating a time zone structure, classified in class 368, subclass 21.
- III. Claims 37-52, 62-63, drawn to a computer system to generating a time zone structure, classified in class 361, subclass 679.
- IV. Claims 53-61, 64-65 drawn to a computer system to use a time zone structure, classified in class 361, subclass 679.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the, while the data structure of Group 1 may be generated or used by groups II-IV, per se data structures are not statutory subject matter (MPEP 2106). As such, Group I does not constitute a statutory invention and cannot be considered as "related" to the other groups.

Inventions II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be

practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed, can be used by another apparatus such as by manual calculations and does not require the detailed hardware of the computer as claimed in Group III.

Inventions II and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as calculating time shift and invention IV has separate utility as a computer. See MPEP § 806.05(d).

Inventions III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as a computer for calculating certain time measurements. Invention IV has separate utility as a computer for calculating other time measurements. The inventions of Groups III and IV can be used together in a combination to yield calculations based on generation of certain time-related data. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Also, because these inventions are distinct for the reasons given above and the search required for any of the groups is not

required for any of the other groups, restriction for examination purposes as indicated is

proper.

A telephone call to the applicant to request an oral election was not made due to

the complexity of the restriction requirement.

Applicant is advised that the reply to this requirement to be complete must

include an election of the invention to be examined even though the requirement be

traversed (37 CFR 1.143).

Applicant is further advised that upon allowance of a claim in one of the groups,

claims in the other of the groups containing the same patentable subject matter will be

rejoined and allowed.
